

upgrade your leadership skills in a rapidly digitally transformed world

YDC Inner Advisory Circle

Preview

Change is part of life. Digitalization is massively changing the way we live, lead, work, interact and understand the future of human evolution.

What traits should a leader sharpen to welcome in his best mindset the world's digitalization and perfectly fit and lead in the new era?

Join our Inner Advisory Circle with Anastasios Spanidis and deep dive in preparing yourself for **YOUR** digital transformation as a leader, understanding the new rules and attributes needed for success in a rapidly ever evolving world!

CEO Advisor

Chairman, Generation Y
VP of Innovation, CEO Clubs Greece

Your gains:

- Understand the digital transformation and the “changes” it brings, before evolution happens.
- Technology vs Human. Make technology your ally.
- Adaptability. The golden skill.
- Importance of vision. Human comes before technology.
- Make the team follow with passion. There is no “I” in teams.
- Talent retaining. Intrapreneurship vs presentism.
- Growth mindset. A road to success.
- How **YOU LEAD** in this sea! No one did it without passing through the storms.

Calendar 2021

Monthly meetings TBC from
May 2021 – Jan 2022

upgrade your leadership skills in a rapidly digitally transformed world

YDC Inner Advisory Circle

The Inner Advisory Circle Chapters

Understand digital transformation and the “changes” it brings before it happens

An eye-opening session regarding the history of digital transformation in order to better understand it. How it evolved until today. What to expect in the near future from technology. How to see and predict the far future regarding the impact in human's life and business.

Technology vs Human

Technology always supported the human evolution. Examples how this happened with inventions (examples: auto/airplanes and so on). What will be really of value as skill in the near future. How new job positions will be created and how old ones will disappear? Learn how to read the map!

Adaptability

The speed of change is exponential. Learn how to follow or even be one step in front of each technological evolution. Adaptability is the key to lead. Reskill and upskill will be a way of living. What other skills follow?

Importance of vision

Technology will be there to help us, improve us. The more though technology comes forward the less important it will be, while human traits such as humor, passion, creativity, empathy will become more and more valuable in the business world. The leader needs a vision that will be crystal clear for him and his team. How to communicate it successfully to your team and make them join your vision!

Make the team follow with passion

If you want to go fast go alone but if you want to go far go with a team. No business hits its goals without a talented team. How to motivate your team in a digital world. The importance of right interaction, the balanced analogy between human touch and digi touch are some of the keys to reach your goals no matter how big these are.

Talent retaining. Intrapreneurship

If humans are our best assets, then how do we treat them? How do we upskill them? How do we support their personal goals while helping the bigger goal of the team? Make the team's goal their passion. Incentivize them to evolve the team and themselves.

Growth mindset

Business is a marathon, not a sprint. How the right mindset releases creativity, innovation, trust and focus. How to keep people in the right mindset for a long time and how this becomes the team's culture under the right leadership.

How YOU LEAD in this sea!

The knowledge is given. In this session we look at our mirror and create our own commitment each one to him/herself on how his/her personal style of leadership will evolve. What will be the main, fresh characteristics that will drive his/her efforts through the sea of changes in the digital world that is coming.
